

## TEA CONTROL Tea Maker with Brew Stop Insert

Every tea is unique and different types of tea require different times to steep properly. The patented TEA CONTROL offers the perfect solution; it is quick and easy to use. Simply turn the lid of the non-electric tea maker to stop the brewing process at any desired point, or turn it counterclockwise to continue the steeping.

Instead of preparing the tea in the kitchen, the tea can be brewed right at your table without having to remove the filter.

With the TEA CONTROL you can enjoy a perfectly brewed cup of tea every time - from first cup to last. The stylish glass pot allows you to monitor the expansion of the leaves and the spreading of the leaves' color and flavor.

The tea maker is heat safe and can be placed on the stove. The perforation at the bottom of the infuser allows a steady, fast flow of water to pour in. High tech material (PA) makes the patented infuser very durable and completely taste and odor free. TEA CONTROL is safe for dishwasher use, and it is also easy to rinse under running water.

The eye-catching design has been awarded the exclusive European Red Dot Award. TEA CONTROL is available in black and in several vivid colors. Being part of the "finum" line of products, TEA CONTROL is available at STARBUCKS shops and at design oriented specialty shops such as SUR LA TABLE.

Preparing any type of loose and bagged teas has never been so simple and enjoyable. No other non-electric tea maker allows full bodied infusion combined with an effective infusion stop. Tea is becoming a lifestyle choice and so will TEA CONTROL. Even the non tea drinker will be intrigued.
